Fractal image encoding is a computationally intensive method of compression due to its need to find the best match between image sub-blocks by repeatedly searching a large virtual codebook constructed from the image under compression.

Fractal Image Compression - Image Compression | Coursera Fractal image compression relates to vector quantization, but unlike VQ where, a codebook needs to be transmitted to the decoder with fractal encoding this codebook is a virtual one. Facial image recognition based on fractal image encoding ... Facial image recognition based on fractal image encoding Utilizing this feature, a new method of facial image recognition based on fractal image encoding is examined. Fractal image encoding can approximate any given image by capturing intrinsic selfâ€•similarity within the image. Fractal-based image encoding and compression techniques Fractal image compression is a technique based on the representation of an image by a contractive transform, on the space of images, for which the fixed point is close to the original image.
